4. Does the sketch actually address the problems it's targeting?

For each issue the designer identified, does the proposed design fix it — or work around it?

Design should fix the problem because it provide user more infomation about what they doing

5. Are there any new usability problems introduced by this design?

Think about what a user might struggle with if this design was implemented.

the infomation that provide need to be clear

6. Is this design specific enough to test with a real user?

Or is it still too vague to prototype?

Ready to prototype / Needs more detail / Too vague to test

Explain:

Design is simple are clear

7. Which ONE design should the designer prototype?

Recommended design: Sketch 2

Reason:

most important one.
